Walking Tips

Aim for 30-60 minutes a day of walking or other moderate physical activity, five days a week. Several short walks a day (10 to 20 minutes) can be as effective in improving and maintaining health as one long walk.

Wear comfortable, sturdy shoes with good arch support, a firm heel, and plenty of room for your toes.

Walk briskly, but make sure you can maintain a conversation while walking. Stop if you feel pain, severe fatigue, light-headedness, dizziness, or significant shortness of breath.

Warm up and cool down with five minutes of slow walking. Do some light stretching after your walk.

Set goals to walk for specified amounts of time rather than distance. An average pace of brisk walking is one mile in 18-20 minutes. Beginners should strive for a 30-minute per-mile pace.

Drink water before you feel thirsty—before, during, and after exercise.

When walking on trails shared with bicyclists, be aware of their presence and keep to the right while on the trail.
