

## Conducted Energy Device

### 304.1 PURPOSE AND SCOPE

This policy provides guidelines for the issuance and use of TASER devices.

### 304.2 POLICY

The TASER® device is intended to control a violent or potentially violent individual, while minimizing the risk of serious injury. The appropriate use of such a device should result in fewer serious injuries to deputies and suspects.

### 304.3 ISSUANCE AND CARRYING TASER DEVICES

Only members who have successfully completed department-approved training may be issued and carry the TASER device.

Deputies shall only use the TASER device and cartridges that have been issued by the Department. Uniformed deputies who choose to carry the TASER device shall wear the device in an approved holster on their person. Non-uniformed deputies may secure the TASER device in the driver's compartment of their vehicle.

Members carrying the TASER device should perform a spark test on the unit prior to every shift.

When carried while in uniform deputies shall carry the TASER device in a weak-side holster on the side opposite the duty weapon.

- (a) All TASER devices shall be clearly and distinctly marked to differentiate them from the duty weapon and any other device.
- (b) Whenever practicable, deputies should carry two or more cartridges on their person when carrying the TASER device.
- (c) Deputies shall be responsible for ensuring that their issued TASER device is properly maintained and in good working order.
- (d) Deputies should not hold both a firearm and the TASER device at the same time.

### 304.4 VERBAL AND VISUAL WARNINGS

A verbal warning of the intended use of the TASER device should precede its application, unless it would otherwise endanger the safety of deputies or when it is not practicable due to the circumstances. The purpose of the warning is to:

- (a) Provide the individual with a reasonable opportunity to voluntarily comply.
- (b) Provide other deputies and individuals with a warning that the TASER device may be deployed.

## *Conducted Energy Device*

---

If, after a verbal warning, an individual is unwilling to voluntarily comply with a deputy's lawful orders and it appears both reasonable and feasible under the circumstances, the deputy may, but is not required to, display the electrical arc (provided that a cartridge has not been loaded into the device), or the laser in a further attempt to gain compliance prior to the application of the TASER device. The aiming laser should never be intentionally directed into the eyes of another as it may permanently impair his/her vision.

The fact that a verbal or other warning was given or the reasons it was not given shall be documented by the deputy deploying the TASER device in the related report.

### **304.5 USE OF THE TASER DEVICE**

The TASER device has limitations and restrictions requiring consideration before its use. The TASER device should only be used when its operator can safely approach the subject within the operational range of the device. Although the TASER device is generally effective in controlling most individuals, deputies should be aware that the device may not achieve the intended results and be prepared with other options.

#### **304.5.1 APPLICATION OF THE TASER DEVICE**

The TASER device may be used in the following circumstances, when the circumstances perceived by the deputy at the time indicate that such application is reasonably necessary to control a person who:

- (a) Is violent or is physically resisting to the point there is a "risk of immediate danger".
- (b) Has demonstrated, by words or actions, an intention to be violent or to physically resist, and reasonably appears to present the potential to harm deputies, him/herself or others.

Mere flight from a pursuing deputy, without other known circumstances or factors, is not good cause for the use of the TASER device to apprehend an individual. Mere physical resistance is not synonymous with "risk of immediate danger". The deputy must be able to reasonably articulate his / her perception of "risk of immediate danger".

#### **304.5.2 SPECIAL DEPLOYMENT CONSIDERATIONS**

The use of the TASER device on certain individuals should generally be avoided unless the totality of the circumstances indicates that other available options reasonably appear ineffective or would present a greater danger to the deputy, the subject or others, and the deputy reasonably believes that the need to control the individual outweighs the risk of using the device. This includes:

- (a) Individuals who are known to be pregnant.
- (b) Elderly individuals or obvious juveniles.
- (c) Individuals with obviously low body mass.

Shasta County SD Policy Manual

## *Conducted Energy Device*

---

- (d) Individuals who are handcuffed or otherwise restrained.
- (e) Individuals who have been recently sprayed with a flammable chemical agent or who are otherwise in close proximity to any known combustible vapor or flammable material, including alcohol-based oleoresin capsicum (OC) spray.
- (f) Individuals whose position or activity may result in collateral injury (e.g., falls from height, operating vehicles).

Because the application of the TASER device in the drive-stun mode (i.e., direct contact without probes) relies primarily on pain compliance, the use of the drive-stun mode generally should be limited to supplementing the probe-mode to complete the circuit, or as a distraction technique to gain separation between deputies and the subject, thereby giving deputies time and distance to consider other force options or actions.

The TASER device shall not be used to psychologically torment, elicit statements or to punish any individual.

### 304.5.3 TARGETING CONSIDERATIONS

Reasonable efforts should be made to target lower center mass and avoid the head, neck, chest and groin. If the dynamics of a situation or officer safety do not permit the deputy to limit the application of the TASER device probes to a precise target area, deputies should monitor the condition of the subject if one or more probes strikes the head, neck, chest or groin until the subject is examined by paramedics or other medical personnel.

### 304.5.4 MULTIPLE APPLICATIONS OF THE TASER DEVICE

Deputies should apply the TASER device for only one standard cycle and then evaluate the situation before applying any subsequent cycles. Multiple applications of the TASER device against a single individual are generally not recommended and should be avoided unless the deputy reasonably believes that the need to control the individual outweighs the potentially increased risk posed by multiple applications.

If the first application of the TASER device appears to be ineffective in gaining control of an individual, the deputy should consider certain factors before additional applications of the TASER device, including:

- (a) Whether the probes are making proper contact.
- (b) Whether the individual has the ability and has been given a reasonable opportunity to comply.
- (c) Whether verbal commands, other options or tactics may be more effective.

Deputies should generally not intentionally apply more than one TASER device at a time against a single subject.

### 304.5.5 ACTIONS FOLLOWING DEPLOYMENTS

Deputies shall notify a supervisor of all TASER device discharges.

### *Conducted Energy Device*

---

#### 304.5.6 DANGEROUS ANIMALS

The TASER device may be deployed against an animal as part of a plan to deal with a potentially dangerous animal, such as a dog, if the animal reasonably appears to pose an imminent threat to human safety and alternative methods are not reasonably available or would likely be ineffective.

#### 304.6 DOCUMENTATION

Deputies shall document all TASER device discharges, unintentional discharges and arcing (other than testing/training) in the related arrest, crime or incident report. Notification shall also be made to a supervisor in compliance with the Use of Force Policy.

##### 304.6.1 REPORTS

The deputy should include the following in the arrest, crime or incident report:

- (a) Identification of all personnel firing TASER devices
- (b) Identification of all witnesses
- (c) Medical care provided to the subject
- (d) Observations of the subject's physical and physiological actions
- (e) Any known or suspected drug use, intoxication or other medical problems

#### 304.7 MEDICAL TREATMENT

Consistent with local medical personnel protocols and absent extenuating circumstances, only appropriate medical personnel should remove TASER device probes from a person's body. Used TASER device probes shall be treated as a sharps biohazard, similar to a used hypodermic needle, and handled appropriately. Universal precautions should be taken.

All persons who have been struck by TASER device probes or who have been subjected to the electric discharge of the device shall be medically assessed prior to booking. Additionally, any such individual who falls under any of the following categories should, as soon as practicable, be examined by paramedics or other qualified medical personnel:

- (a) The person is suspected of being under the influence of controlled substances and/or alcohol.
- (b) The person may be pregnant.
- (c) The person reasonably appears to be in need of medical attention.
- (d) The TASER device probes are lodged in a sensitive area (e.g., groin, female breast, head, face, neck).
- (e) The person requests medical treatment.

Any individual exhibiting signs of distress or who is exposed to multiple or prolonged applications (i.e., more than 15 seconds) shall be transported to a medical facility for examination or medically evaluated prior to booking. If any individual refuses medical attention, such a refusal should be

## *Conducted Energy Device*

---

witnessed by another deputy and/or medical personnel and shall be fully documented in related reports. If an audio recording is made of the contact or an interview with the individual, any refusal should be included, if possible.

The transporting deputy shall inform any person providing medical care or receiving custody that the individual has been subjected to the application of the TASER device.

### **304.8 SUPERVISOR RESPONSIBILITIES**

When possible, supervisors should respond to calls when they reasonably believe there is a likelihood the TASER device may be used. A supervisor should respond to all incidents where the TASER device was activated.

A supervisor shall review each incident where a person has been exposed to an activation of the TASER device. The device's onboard memory may be downloaded through the data port by a supervisor or designee and saved with the related arrest/crime report. Photographs of probe sites may be taken and witnesses interviewed.

### **304.9 TRAINING**

Personnel who are authorized to carry the TASER device shall be permitted to do so only after successfully completing the initial department-approved training. A reassessment of a deputy's knowledge and/or practical skill may be required at any time if deemed appropriate by the Training Coordinator. All training and proficiency for TASER devices will be documented in the deputy's training file.

Command staff, supervisors and investigators should receive TASER device training as appropriate for the investigations they conduct and review.

Deputies who do not carry TASER devices should receive training that is sufficient to familiarize them with the device and with working with deputies who use the device.

The Training Coordinator is responsible for insuring that all members who carry TASER devices have received initial proficiency training. Periodic audits may be used for verification.

Application of TASER devices during training could result in injury to personnel and should not be mandatory for certification.

The Training Coordinator should ensure that all training includes:

- (a) A review of this policy.
- (b) A review of the Use of Force Policy.
- (c) Performing weak-hand draws or cross-draws to reduce the possibility of accidentally drawing and firing a firearm.
- (d) Target area considerations, to include techniques or options to reduce the accidental application of probes near the head, neck, chest and groin.

## *Conducted Energy Device*

---

- (e) Handcuffing a subject during the application of the TASER device and transitioning to other force options.
- (f) De-escalation techniques.
- (g) Restraint techniques that do not impair respiration following the application of the TASER device.
